

Warehouse Management System Flow

Warehouse Management System Features

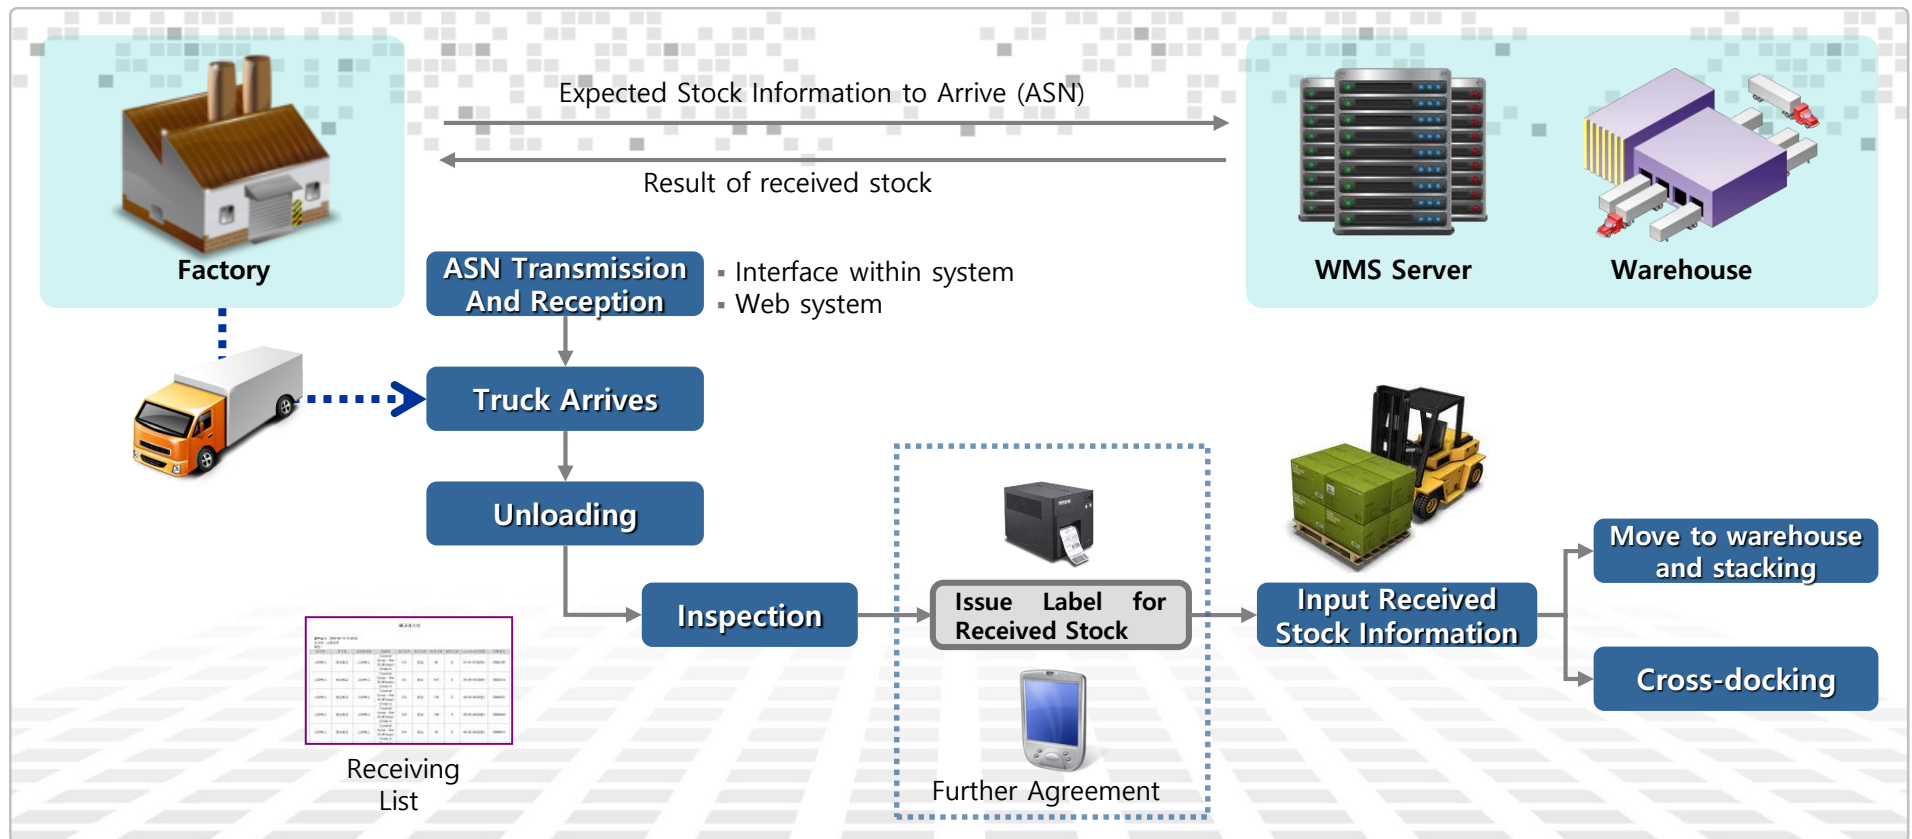

WMS has basic features including Master Data Management, Receiving Management, Shipping Management, etc. And it has advanced features such as Cost Management, Work Management, Monitoring, etc.

Warehouse Management System Process

You can manage receiving information in real time with PDA processing.

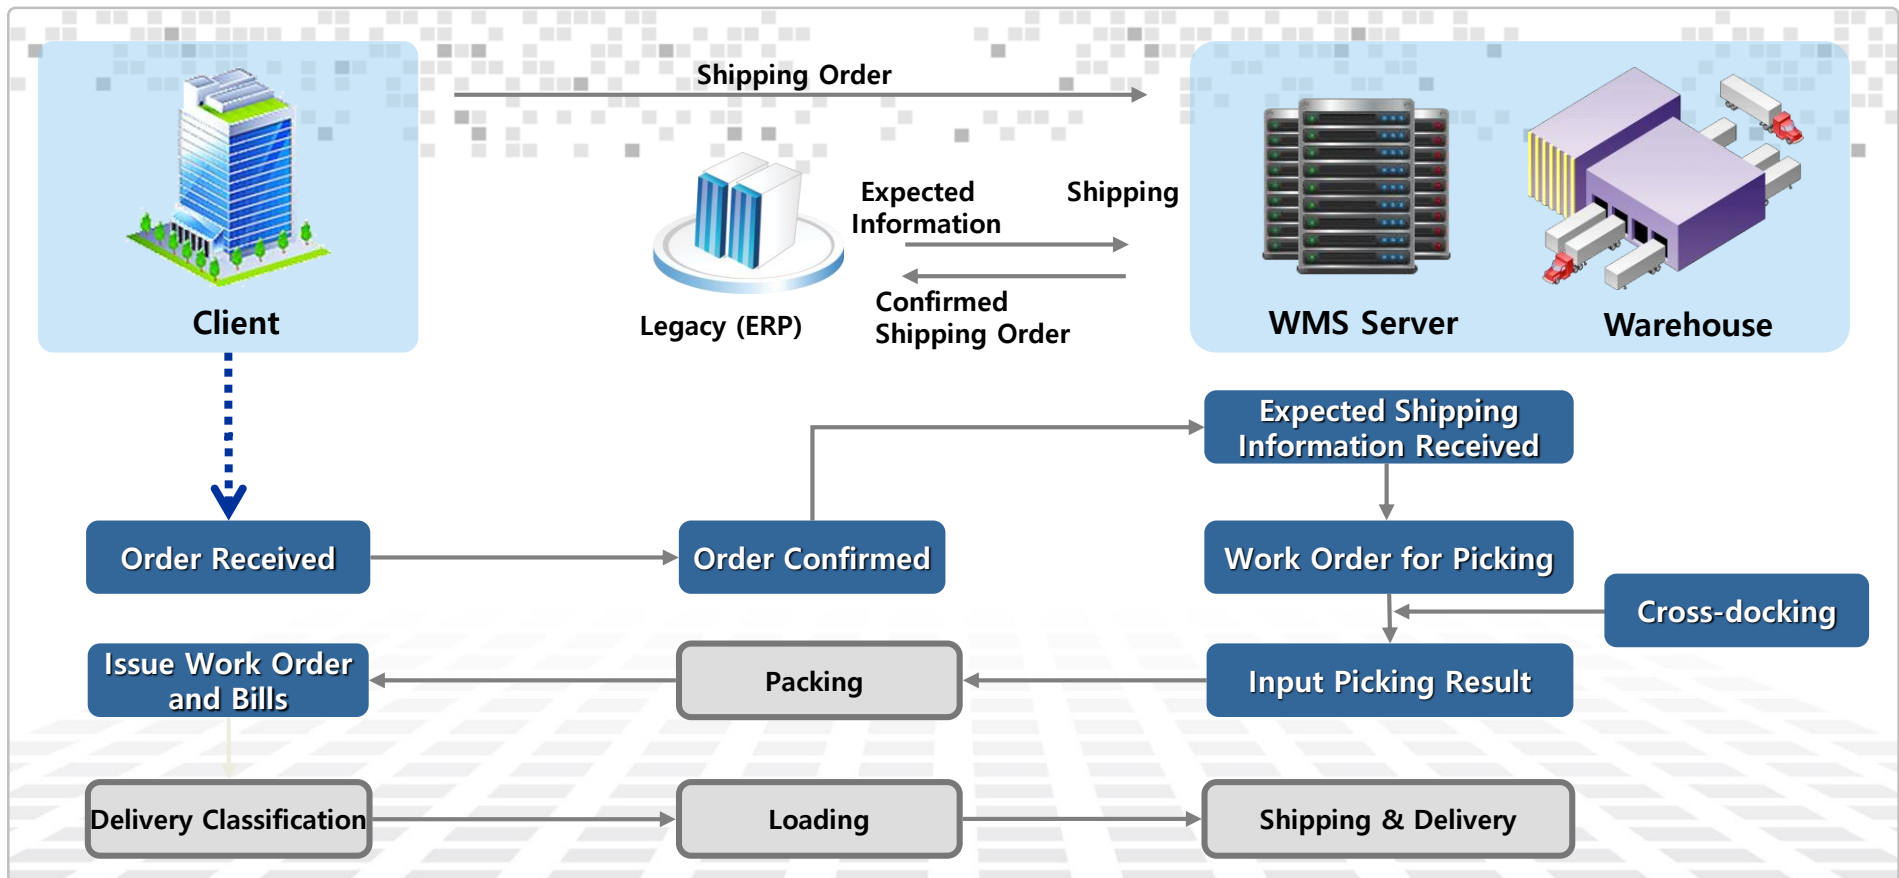

Receiving Process

Warehouse Management System Process

We support various shipping process by setting shipping plan. Furthermore, you can manage your warehouse with FIFO rule provided in the system.

Shipping Process

Warehouse Management System Process

WMS has inventory management feature including inquiry inventory status, inventory history, inventory to stay for a reason, etc. Also you can set certain inventory as "SAFETY STOCK".

Inventory Inquiry

- Reflect current inventory status to the system in real time when receiving and shipping is processing.
- Inventory Information includes current inventory, expected inventory, and inventory movement.
